

Fig. 1

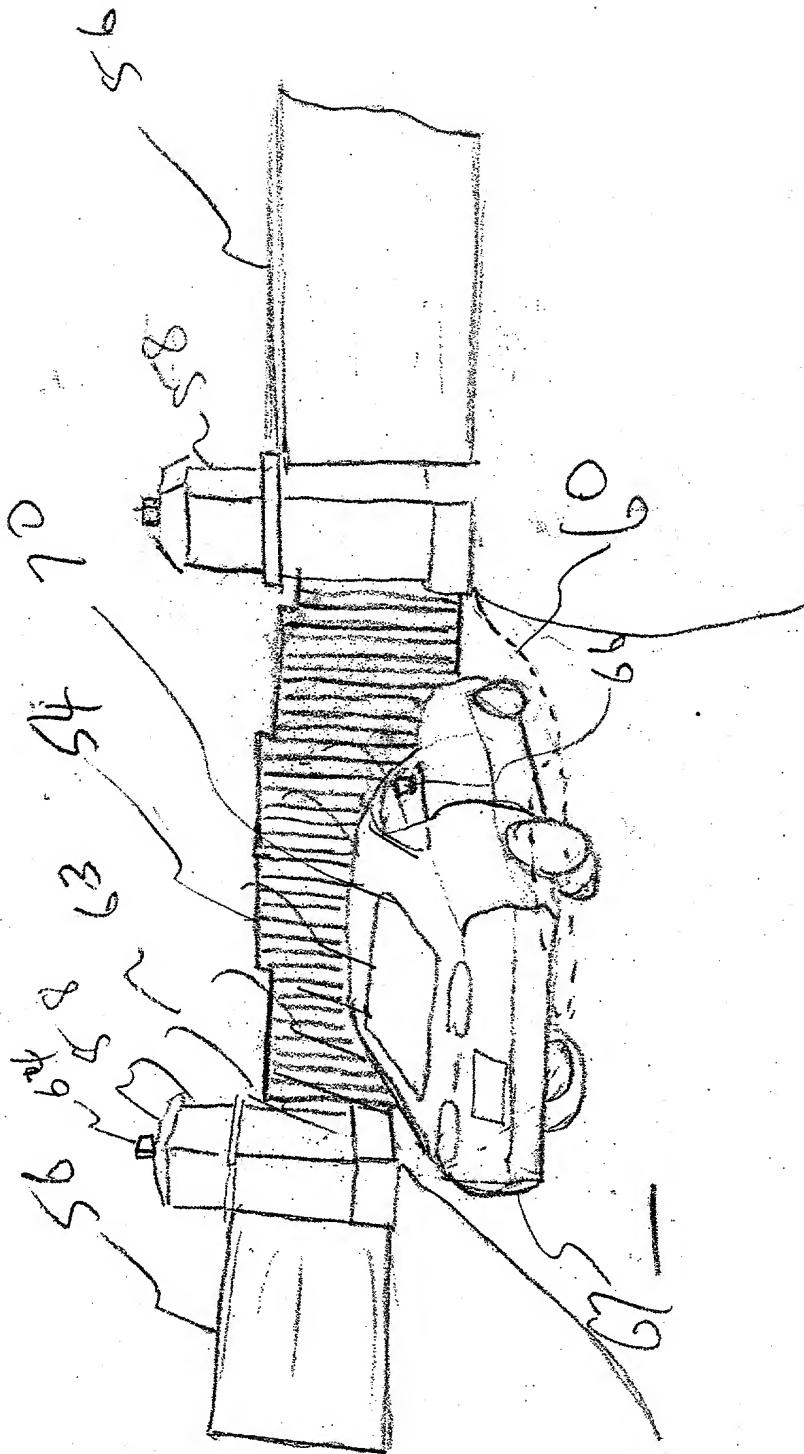

FIG. 2

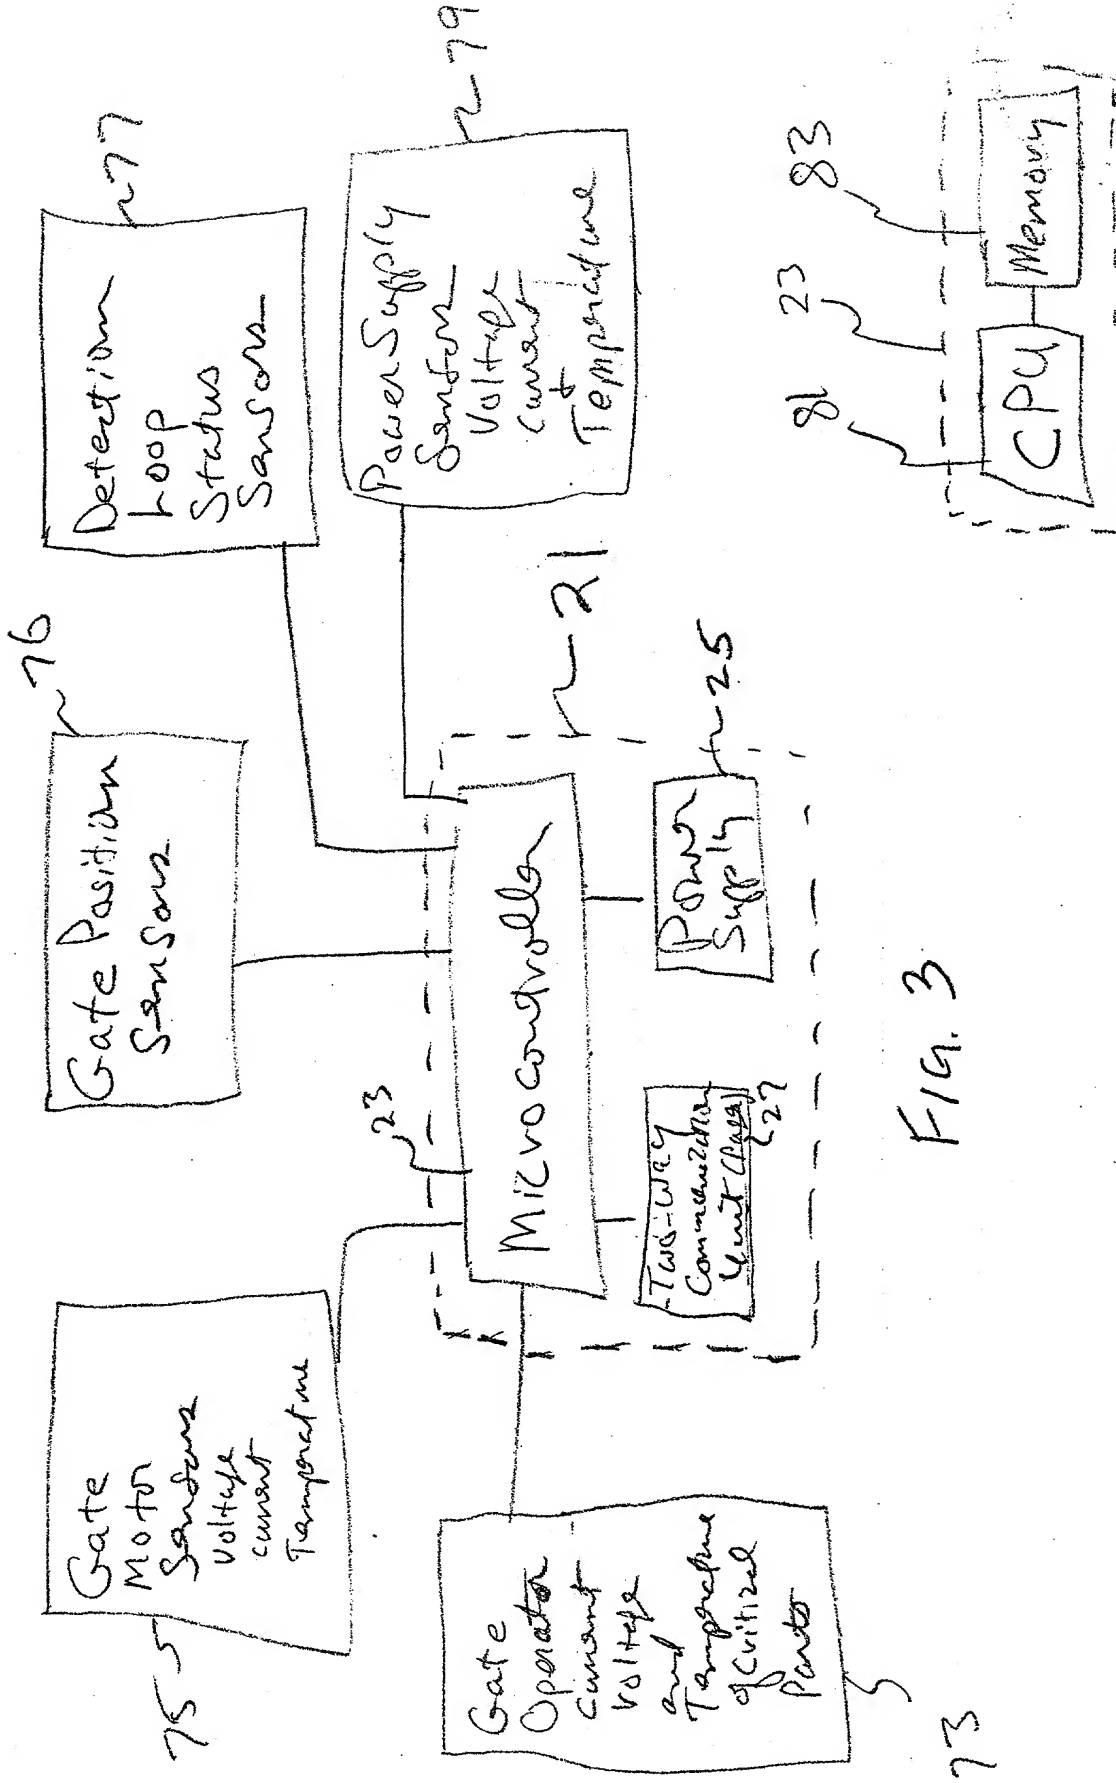

Fig. 3

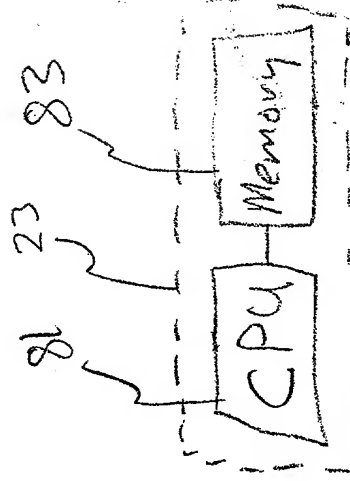

Fig. 4

Diagnostic Unit monitors operational parameters of the system.

101

Determination by Diagnostic Module as to whether or not all of the systems operational parameters are within preset levels.

103

Yes

105

No

107

Diagnostic module generates a potential failure signal on its two-way wireless communication unit.

109

Receipt of potential failure signal by remote unit.

111

Remote Unit, via two-way wireless communication units, requests additional information on the status of the operational parameters.
